- Largest independently owned rewind facility
- Current owners and managers are the industry pioneers
- Wide capability range (over 4,000 parts)
- Authorized OEM rewind facility for many manufacturers
- Serving airlines worldwide, accessory shops, and military sub contractors
- Engineering for R&D / Prototypes
- Extensive machine shop

Our expert technicians and modern facility have made us the aircraft rewind and electrical repair leaders of the world.

We Are The Experts at rewinding and electrical repair on the *greatest variety of parts* in the world. Established in 1972, Aircraft Electric Motors is an independently owned rewind facility with over **60,000 square feet** of space, **equipped and stocked** to handle all of your commercial, corporate, helicopter and military needs.

Aircraft Electric Motors was founded 49 years ago by a group of dedicated individuals with over 20 years in the aviation rewind industry. Since that time AEM has developed an extensive list of clientele ranging from small aircraft maintenance shops to major OEM's. We don't pick and choose the jobs we want, we apply our world class service to all jobs, big or small.

Over time we have developed the processes and knowledge to do the job right the first time. Our staff has already mastered the most difficult jobs. This gives our customers the confidence that we will continue to deliver quality parts in a timely manner.

Our experience and knowledge of the industry allows us to reduce the time and costs involved in repairing each part. This provides our customers with the opportunity to avoid using less experienced shops in the field or purchasing brand new units. Because of the prohibitive replacement costs of aircraft electrical components, our services can save our customers 40% to 90%.

Today we staff a 60,000 square foot facility with over 150 employees. For the last four decades and into the future, Aircraft Electric Motors will continue to keep you flying.

CAPABILITIES

AEM can service any electrical component on any aircraft. The following are just a small sample of what we can do:
